                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 10,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            abrin-c precursor - Indian licorice
NyContains: RNA N-glycosidase (EC 3.2.2.2)
NyContains: RNA N-glycosidase (EC 3.2.2.2)
C.Species: Abrus precatorius (Indian licorice)
C.Spacies: Abrus precatorius (Indian licorice)
C.Spacession: S1602

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A;Residues: 22-270 <KON>
C;Comment: This protein is a ribosome-inactivating protein and exhibit cytotoxic, aborti:
C;Comment: This protein is a ribosome-inactivating proteins which catalytic
C;Comment: This protein belongs to type I ribosomal-inactivating proteins which catalytic
C;Superfamily: rRNA N-glycosidase; rRNA N-glycosidase homology

Abrin-a precursor - Indian licorice (fragment)
N;Contains: rRNA N-glycosidase (EC 3.2.2.2)
N;Contains: rRNA N-glycosidase (EC 3.2.2.2)
C;Species: Abrus precatorius (Indian licorice)
C;Species: Abrus precatorius (Indian licorice)
C;Accession: S3429; JT0202; A39761; JC1398; S14472; S24133; S74110; S74111

"Analysis of several key active site residues of ricin A chain by

"The content of the content content is responsible for inhibiting to protein synthesis through the catalytic inactivation of 608 ribosomal subunits. It acts as a glycosidase that removes a specific adenine residue from an exposed loop of 288 ribosomal RNA. As this loop is involved in the binding of elongation factors, the modified ribosomes are unable to support protein synthesis. The A chain can inactivate a few thousand ribosomes per minute, thus inactivating them faster than the cell can make new ones. A single A-chain molecule can therefore kill an animal cell. The B chain binds to cell receptors and facilitates the for cell agglutination (Lectin activity). It binds to beta-D-

C -1-GATALYTC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        specific adenosine on the 28S frna.
SUBUNIT: Disulfide-linked dimer of A and B chains.
DOMAIN: The B chain is composed of two domains, each domain osnists of 3 homologous subdomains (alpha, beta, gamma).
PTM: THE MAJOR A-CHAIN IS GLYCOSYLATED ONLY IN POSITION 45 AND THE MINOR A-CHAIN IS GLYCOSYLATED ALSO IN POSITION 271.
SIMILARITY: IN THE N-TERMINAL SECTION, BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY. TYPE 2 RIP SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   'X-ray structure of recombinant ricin A-chain at 1.8-A resolution.";

Eur. J. Biochem. 105:453-459(1980).

-! - CATALYITY CACTIVITY: Endohydrolysis of the N-glycosidic bond at one specific adenosine on the SES FRNA.

-!- SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY. TYPE 2 RIP SUBFAMILY.

-!- SIMILARITY: Contains 2 ricin B-type lectin domains.

IT INACTIVATES EUKARYOTIC 60S RIBOSOMAL SUBUNITS.
-!- CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one specific adenosine on the 28S rRNA.
-!- SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.
-!- TYPE 1 RIP SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           STRAIN=Maximowicz; TISSUE=Leaf;

"Preproabtin: genomic clouing, characterisation and the expression of the A-chain in Escherichia coli."

"Eur. J. Biochem. 198:723-732(1991).

"Eur. J. Biochem. 198:723-732(1991).

"I. FUNCTION: THE A CHAIN IS RESPONSIBLE FOR INHIBITING PROTEIN SYNTHESIS THROUGH THE CATALYTIC INACTIVATION OF 60S RIBOSOMAL SOURDING ADENINE FROM POSITION 4,324 OF 28 S.RRNA. THE SCHALTYTIC ACTIVITY: Endohydrolysis of the N-91ycosidic bond at one specific adenosine on the 28S FRNA.

"I. CATALYTIC ACTIVITY: Endohydrolysis of the N-91ycosidic bond at one specific adenosine on the 28S FRNA.

"I. DOMAIN: THE B CHAIN IS COMPOSED OF TWO DOMAINS, EACH DOMAIN CONSISTS OF 3 HOWOLOGOUS SUBDOMAINS (ALPHA, BETA, GAMMA).

"I. DOMAIN: THE B CHAIN THE N-TERMINAL SECTION; BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY: TYPE 2 RIP SUBFAMILY:

"I. TILL J. SIMILARITY: CONTAINS 2 FIGH B CHAIN GONDAINS."

"I. TYPE 2 RIP SUBFAMILY: CONTAINS 2 FIGH Decin domains.

-!- CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one apecific adenosine on the 28S rRNA.
-!- SUBUNIT: DISULFIDE-LINKED DIMER OF A AND B CHAINS.
-!- DOMAIN: THE B CHAIN IS COMPOSED OF TWO DOMAINS, EACH DOMAIN CONSISTS OF 3 HOWOLGOUS SUBDOMAINS (ALPHA, BETA, GAMMA).
-!- SIMILARITY: IN THE N-PERMINAL SECTION; BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY. TYPE 2 RIP SUBFRAMILY.
-!- SIMILARITY: Contains 2 ricin B-type lectin domains.

"The complete amino acid sequences of the B-chains of abrin-a and
abrin-b, toxic proteins from the seeds of Abrus precatorius.";
Biosci. Biotechnol. Biochem. 57:166-169(1993).

1- FUNCTION: THE A CHAIN IS REPONSIBLE FOR INHIBITING PROTEIN
SYNTHESIS THROUGH THE CATALYTIC INACTIVATION OF 60S RIBOSOWAL
SUBMINTS BY REMOVING ADENINE FROM POSITION 4,324 OF 28 S RRNA.
ABRIN-A IS MORE TOXIC THAN RICIN.

-!- FUNCTION: THE B CHAIN IS A GALACTOSE-SPECIFIC LECTIN THAT
FACILITATES THE BINDING OF ABRIN TO THE CELL MEMBRANE THAT

PROTEIN SYNTHESIS BUT DOES NOT AFFECT PLANT NOR BACTERIAL PROTEIN SYNTHESIS. THE A CHAIN IS RESPONSIBLE FOR INHIBITING PROTEIN SYNTHESIS THROUGH THE CATALYTIC INACTIVATION OF 60S RIBOSOMAL SUBUNITS BY REMOVING ADENINE FROM FOSITION 4,324 OF 28 S. RRNA. THE B. CHAIN IS A GALACTOSE-SPECIFIC LECTIN THAT FACILITATES THE BINDING OF NIGRIN B TO THE CELL MEMBRANE THAT PRECEDES

-!- SUBUNIT: DISULFIDE-LINKED DIMER OF A AND B CHAINS.
-!- SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE RIBOSOME-
INACTIVATING PROTEIN FAMILY. TYPE 2 RIP SUBFAMILY.
-!- SIMILARITY: Contains 2 ricin B-type lectin domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (POTENTIAL).

"Cloning and analysis of a cDNA coding a putative ribosome-
"Cloning and analysis of a cDNA coding a putative ribosome-
inactivating protein from Cucumis figarei.";
Plant Biotechnol. 17:337-340 (2000).
-!- CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one
specific adenosine on the 28s rRNA.
-!- SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.
TYPE I RIP SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 28 VKFSLLGSNHKSYSKFITSMRNALPNAGDIYNIPLLVPSISGSRRYILMQLSNYEGNTIT

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
